HELP CREATE HEALTHIER LIVES

You're a problem solver. **You impact health care every day.**

You believe that solutions are built on a solid foundation of data. In the [Clinical & Health Informatics online graduate programs](#) from UW–Madison, you'll learn to navigate and apply health care data to facilitate change that helps improve care and overall health for all. Your in-demand Master of Science in Clinical & Health Informatics or Capstone Certificate in Clinical & Health Informatics opens doors to exciting new responsibilities, leadership opportunities and rewards.

100% online, interdisciplinary curriculum

Clinical & Health Informatics online graduate programs are designed for working professionals with 3–5 years of clinical, information technology (IT) or data experience in a health care setting. Project-based, interdisciplinary curriculum in each program connects experts across fields to combine insights, data skills and clinical care. This unique approach gives you a tangible advantage in the ever-changing health care environment. Each program connects several UW–Madison schools and colleges:

- School of Medicine and Public Health
- College of Engineering
- School of Nursing
- School of Pharmacy
- Wisconsin School of Business

Earn your master's from a top medical school

On track for industry accreditation, Clinical & Health Informatics online graduate programs are housed in the Institute for Clinical and Translational Research (ICTR) within the School of Medicine and Public Health, one of only a few population health schools in the U.S. ICTR bridges millions of dollars of research to practice, facilitating this remarkable opportunity for training professionals in solving health care problems using real-world data.

ONLINE GRADUATE PROGRAMS IN CLINICAL & HEALTH INFORMATICS

MASTER OF SCIENCE IN CLINICAL & HEALTH INFORMATICS

In this project-based (no thesis required), 100% online master's program, you'll learn to leverage skills in operational and health care management, health informatics and information technology to enhance your professional practices. You'll gain the knowledge to make confident decisions about health, security and biomedical and health information problems. You'll also get skills and insights to help create new or improve existing solutions for health care delivery, prevention and outcomes.
